CSS IMPROVEMENTS

CSS Enhancements to My Resume Website For this assignment

I redesigned my resume website to reflect the CSS skills learned in the course, creating a professional and user-friendly design. Key improvements include: -

Color Scheme: Implemented a dark blue theme (#1e3a5f) with off-white text (#f0f0f0) for a modern, readable look, ensuring visual consistency across sections.

Typography: Used Times New Roman for a formal appearance, aligning with the resume's professional tone.

Navigation: Designed a sticky navigation bar with flexbox, featuring smooth scrolling and hover effects for improved navigation.

Section Design: Applied class selectors (content-section) to style sections with rounded corners, box-shadows, and padding, creating a card-like layout.

Skills Display: Used flexbox to present skills as styled tags, enhancing visual appeal and readability.

Responsive Design: Added media queries to ensure the site is mobile-friendly, with a stacked navigation bar and adjusted padding for smaller screens.

Interactivity: Incorporated CSS transitions for hover effects on buttons and links, adding subtle interactivity without JavaScript. These enhancements showcase my understanding of CSS flexbox, selectors, transitions, and responsive design, making the website both functional and aesthetically pleasing.
